Skills

- HTML
- CSS (Sass, Bootstrap)
- JavaScript (ReactJS)
- PHP (Laravel)
- WordPress
- SQL

Work Experience

2021 March – present

Full Stack Developer - IThire

I work at IThire's main product and on several side projects. As a Full Stack Engineer, I create and maintain web applications. My role involves three main parts:

- **UI Development:** I build the parts of websites and apps that users see and interact with, using technologies like HTML and CSS. I use CSS, including layout techniques such as Flexbox and Grid.
- **Front-end Development:** I develop interactive and dynamic features using JavaScript and the ReactJS library.
- **Back-end Development:** In the back-end, I work using languages like PHP and frameworks like Laravel.

Languages

- Armenia (native)
- Russian (fluent)
- English (limited working proficiency)
