EXPERIENCE

IT Hire, Yerevan — *Full Stack Developer*

March 2021 - PRESENT

I work at IThire's main product and on several side projects. As a Full Stack Engineer, I create and maintain web applications. My role involves three main parts:

– **Front-end Development:** I develop interactive and dynamic features using JavaScript and the ReactJS library.

– **Back-end Development:** In the back-end, I work using languages like PHP and frameworks like Laravel.

– **Software Testing:** I perform detailed manual testing, specializing in functional and regression. Also helping the QA team to design test cases.

Freelance, Online — Manual QA and *Back-End Developer*

March 2020 - March 2021

I was creating a CRM system that was maintaining 3 online casinos. Also, I was participating in the tests that were meant to cover all edge cases related to financial fraud.
